Excludes FOB & Hazardous Charges

Anything not on hand call for price.

Handling & Storing Vaccines

The dashboard or you pick-up is not considered room temperature, nor is a freezer the same as a refrigerator.

Most vaccines should be stored at room temperature or in the refrigerator. Vaccines should be kept cool and out of sunlight and harmful UV rays. Reconstituted vaccine should be used right away after mixing. Throw away any mixed vaccine not used within an hour after reconstituting. Change needles often and always use a sterile needle to draw additional vaccine from the bottle as equipment contamination is one of the common causes of vaccine failure. Always use the same product in your reusable syringes. Always clean with Hot water only.

Always Read Label Instructions

Vaccine Orders

In order to ensure the protection of vaccines, we prefer to ship all vaccines on Monday, Tuesday, or Wednesday to ensure timely delivery.

Vaccines are non-returnable and non-refundable

Please inform your sales person if you require special shipping and packing instructions. **Remember:** Even though we use Styrofoam boxes and extra packing in maintaining controlled temperatures, we cannot guarantee the condition or temperature of vaccines at delivery. Though your icepacks may be melted upon arrival, they will have protected your vaccines. Be sure to refrigerate you vaccines until you are ready to use them. **Please choose you method of shipment carefully during extreme weather conditions.**
